

# **6C Homeopathic Micro-Dose Semaglutide Oral Spray**

A Clear, Positive Clinical Overview for Healthcare Professionals

Intended audience: Physicians, medical clinics, and licensed healthcare professionals

Delivery form: Oral / sublingual spray

Base: Organic alcohol (ethanol-based)

## **1. Overview**

This 6C homeopathic micro-dose oral spray is prepared from semaglutide source material at a 6C centesimal dilution. The formulation aligns with established homeopathic principles while drawing conceptual inspiration from the well-studied GLP-1 pathway.

This document provides clinicians with a straightforward, easy-to-read background on the product's conceptual framework, formulation approach, and clinical context.

## **2. Semaglutide: Clinical Context**

Semaglutide is widely recognized in conventional medicine as a GLP-1 receptor agonist. GLP-1–based therapies have played a significant role in modern metabolic care by supporting glucose regulation, appetite signaling, and metabolic balance.

The depth of clinical research supporting GLP-1 therapies provides a strong biological foundation for homeopathic exploration at micro-dose levels.

## **3. Homeopathic Micro-Dose Approach**

### **3.1 What 6C Means**

A 6C potency refers to a centesimal (1:100) dilution repeated six times, prepared according to homeopathic pharmacopeial standards. This potency is commonly used in clinical homeopathy and is regarded as a low-to-moderate level.

### **3.2 Clinical Philosophy**

Homeopathic micro-dosing emphasizes gentle, non-pharmacologic signaling rather than biochemical receptor saturation. This formulation is designed to support natural regulatory awareness, offer a subtle and well-tolerated option, and integrate seamlessly into wellness-oriented clinical practices.

## **4. Oral Spray & Organic Alcohol Base**

### **4.1 Oral / Sublingual Delivery**

Oral spray delivery is widely utilized in homeopathic and integrative settings due to its convenience, patient compliance, and favorable clinical experience. Sublingual exposure is traditionally valued for rapid mucosal contact.

### **4.2 Organic Alcohol Base**

The organic alcohol base supports product stability, aligns with traditional homeopathic preparations, and allows for rapid dispersion. Ethanol content is comparable to that of other professional-grade homeopathic oral sprays.

## **5. Safety & Tolerability**

As a homeopathic micro-dose preparation, this formulation does not deliver pharmacologic levels of semaglutide and is intended for gentle, well-tolerated use. Dose-related effects associated with conventional GLP-1 medications are not anticipated.

Clinicians may consider individual sensitivity to alcohol-based preparations when providing patient guidance.

## **6. Clinical Use & Positioning**

This 6C homeopathic semaglutide oral spray is positioned as a non-prescription, non-injectable formulation suitable for wellness-oriented and integrative clinical environments. Clear communication supports appropriate differentiation from prescription GLP-1 therapies.

## **7. Summary**

This 6C Homeopathic Micro-Dose Semaglutide Oral Spray represents a modern homeopathic preparation inspired by the GLP-1 therapeutic category. Its formulation, delivery method, and potency reflect established homeopathic practice while supporting a gentle, patient-friendly clinical approach.
