

## Love Licorice Formula

### Background

The Love Licorice unisex formula is a supplemental pre-intimacy and libido enhancer rapid dissolve tablet.

This formula is designed to boost sexual health and function in both men and women working at the chemical and hormonal levels,

leading to perceptions of improved affective and physical health coupled with enhanced partner connection.

This formula includes Melanotan 2, PT-141, IGF-1, Kisspeptin, B12 (methyl), and Oxytocin.

### Research

Melanotan II (MTII) is a synthetic cyclic heptapeptide analogue of the alpha-MSH anti-inflammatory peptide with increased potency and stability.

It is theorized to promote unisex arousal and response through the hypothalamus, particularly in cases of erectile dysfunction (ED) (Wessells et al., 2000).

PT-141 is a melanocortin analogue used to treat ED and sexual desire disorder.

Studies show it enhances erectile response, especially when co-administered with sildenafil.

Research also supports its use in treating hypoactive sexual desire disorder in women (Safarinejad et al., 2010; Diamond et al., 2019).

IGF-1 (Insulin-like Growth Factor 1) is a peptide hormone essential for tissue repair, muscle regeneration, and hormone signaling.

It supports libido and energy, particularly in individuals experiencing age-related hormonal decline.

IGF-1 also plays a role in enhancing vitality and stamina, making it beneficial in intimacy-focused formulations (Rudman et al., 1990).

Kisspeptin is a neuropeptide that regulates the reproductive hormone axis by stimulating the release of gonadotropin-releasing hormone (GnRH).

This leads to increased secretion of luteinizing hormone (LH) and follicle-stimulating hormone (FSH), essential for testosterone and estrogen production.

Research shows Kisspeptin may enhance libido, sexual motivation, and fertility in both sexes by boosting endogenous sex hormone levels

and stimulating limbic system areas tied to sexual behavior (Comninou et al., 2017).

Other ingredients include:

- Vitamin B12 (methylcobalamin): Supports red blood cell formation, metabolism, and mood (O'Leary & Samman, 2010).

- Oxytocin: A neuropeptide associated with emotional bonding, stress reduction, and physical intimacy (Carter, 1998).

## Conclusion

This formula includes Melanotan 2, PT-141, IGF-1, Kisspeptin, B12 (methyl), and Oxytocin.

The Love Licorice unisex formula is a supplemental pre-intimacy and libido enhancer rapid dissolve tablet.

## Summary

It is designed to boost sexual health and function in both men and women at the chemical and hormonal levels,

leading to enhanced partner connection, energy, and emotional vitality.

This product aims to improve libido, hormonal balance, and physical resilience in men and women.

Users may also experience elevated mood, arousal, and overall sexual well-being.

The Love Licorice unisex formula is a supplemental pre-intimacy and libido enhancer rapid dissolve tablet.

It combines peptides, neurohormones, and vitamins associated with improvements in sexual health.

Users may realize a boost in energy, libido, and overall vitality.

To achieve maximal results, follow supplement panel directions and consult a licensed healthcare provider before use.
